### Re Item V.

1 The following document is referred to in this communication:

D1: DE1073997B (MATTHESIUS, B.) 28 January 1960 (1960-01-28)

- 2 INDEPENDENT CLAIM 1
- 2.1 The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and discloses in the wording of claim 1 (the references in parentheses applying to this document; cf. figure 1):

a dispensing device comprising:

a reservoir (1); one or more dispensing orifices (6') in fluid communication with the reservoir (1); a movable platform (2) movable by means of a screw mechanism, whereby rotation of a screw (3) advances the movable platform (2) against the stored fabric cleaning fluid thereby dispensing a metered dose of the cleaning fluid from the reservoir (1) to be dispensed via the dispensing orifices (6').

The subject-matter of claim 1 differs from this known dispensing device in that it contains a shear-thinning fabric cleaning liquid having viscosity profile such that from rest and up to an applied shear stress of 10 Pa the viscosity of the fluid is at least 100 Pa.s and under a shear field of 20 s<sup>-1</sup> of at most 5 Pa.s.

The subject-matter of claim 1 is therefore new (Article 33(2) PCT).

2.2 The problem to be solved by the present invention may be regarded as to select a cleaning liquid for combination with the dispensing device disclosed in D1 so that the combination provides good dispensing properties while avoiding leakage during storage.

The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT), because in the available prior art it is neither known nor suggested to combine a screw-feed

### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/EP2004/012245

dispensing device as disclosed in D1 with a shear thinning liquid having the claimed properties.

2.3 Claims 2-7 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.

#### CLAIMS

1. A dispensing device comprising: shear-thoning (upud)

(d) a reservoir for storing a fabric cleaning fluid having led viscosity be ever 10 Para ab rest or under an applied from rest and up to an applied such inci from rest and up to an applied shown shows of 10 ft he resembly of he fluid is at least 10 ft. 5 and under a shear second one or more dispensing orifices in fluid communication

with the reservoir

a movable platform movable by means of a screw mechanism, whereby rotation of a screw advances the movable platform against the stored, fabric cleaning fluid thereby dispensing a metered dose of the cleaning fluid from the reservoir to be dispensed via the dispensing orifices.

- 2. A device according to claim 1 wherein the platform comprises a wall or base portion of the reservoir and sliding the platform within the reservoir, progressively reduces the volume of the reservoir thereby forcing the fluid to exit the reservoir.
  - 3. A device according to any preceding claim in which the reservoir and movable platform are non-circular in cross section, such that, in use, rotation of the reservoir relative to the platform is resisted.
  - 4. A device according to any preceding claim in which the cross section of the reservoir and platform include at least one non-curved section.
- 30 5, A device according to any preceding claim in which
